

MED SLED™

Bariatric Evacuation Sled

The Bariatric Med Sled is been designed for the safe movement of large individuals in emergency situations. The Sled has all the same functionality and benefits of the Standard Med Sled, but is 30cm wider to enable the safe vertical and horizontal evacuation of larger patients.

Features:

- Simple and quick to deploy.
- Sled is 100% assembled for vertical and horizontal evacuation.
- Specially designed stairwell braking system allows for safe and controlled descent.
- Allows staff to transport patients 2 – 3 times their own weight.
- No lifting - uses roll and drag method.
- Patented Perimeter Tether Design provides patient stabilization.
- Sled curves slightly up and around evacuee for added protection.
- Three securing cross straps.
- T-strap at foot end provides extra support.
- Sled can accommodate IV bags, oxygen and other small devices.
- Polypropylene flexible base board enables it to move over most exterior and interior surfaces.
- Can be used with backboard or basket stretcher.
- Each sled rolls up compactly to fit inside a carry bag – single shoulder strap bag supplied with every sled.
- Also available is the Med Sled First Call Funeral Sled for the discreet removal of deceased persons, in funeral black with plastic safety buckles.
