

MED SLED™

Standard Evacuation Sled

The Med Sled evacuation system has been designed to enable the vertical and horizontal evacuation of non-ambulant patients/residents from multi-storey buildings and confined space areas, without the need for heavy lifting by carers.

Features:

- Simple and quick to deploy.
- Sled is 100% assembled for vertical and horizontal evacuation.
- Specially designed stairwell braking system allows for safe and controlled descent.
- Allows staff to transport patients 2 – 3 times their own weight.
- No lifting - uses roll and drag method.
- Patented Perimeter Tether Design provides patient stabilization.
- Sled curves slightly up and around evacuee for added protection.
- Three securing cross straps.
- T-strap at foot end provides extra support.
- Sled can accommodate IV bags, oxygen and other small devices.
- Polypropylene flexible base board enables it to move over most exterior and interior surfaces.
- Can be used with backboard or basket stretcher.
- Each sled rolls up compactly to fit inside a carry bag – single shoulder strap bag supplied with every sled.
- Also available is the Med Sled First Call Funeral Sled for the discreet removal of deceased persons, in funeral black with plastic safety buckles.
