

SCBU TABEVAC ^{CE}

The SCBU TabEvac is designed for the easy and safe evacuation of premature and new born babies from hospital and special care baby units (SCBU) in the event of fire or other emergency.

Features & Benefits:

- Large single front pouch pocket or twin front pouch pocket.
- Oxygen cylinder pocket on the back (to allow for manual ventilation if required).
- Three equipment storage pockets on the front.
- Foam padded shoulders.
- Tie sides.
- Colour coded binding .
- Made from strong, cotton drill material.

Using the Tabevac:

- Place over the head with pouch(es) at front.
- Securely fasten ties at both sides.
- If using oxygen, place cylinder in back pocket and direct line through loop on right shoulder.
- Place one baby in pouch (one in each of twin pouches).
- Leave the building.

Product codes: Single Pouch (Neutral binding): TAB001

Twin Pouch (Red binding) : TAB002
